Definition of  
the  
Exponential  
Distribution

- A random variable  $X$  is distributed Exponentially with rate  $\lambda$ ,

$$X \sim \text{Exp}(\lambda)$$

If  $X$  has the probability density function:

$$f(x) = \begin{cases} \lambda e^{-\lambda x} & x \geq 0 \\ 0 & x < 0 \end{cases}$$

The cumulative distribution function,

$$F(x) = P\{X \leq x\} = \int_{-\infty}^x f(y)dy = \begin{cases} 1 - e^{-\lambda x} & x \geq 0 \\ 0 & x < 0 \end{cases}$$

Definition of  
the  
Exponential  
Distribution

- Mean of Exp Dis.

$$E[X] = \int_{-\infty}^{\infty} x f(x) dx = \frac{1}{\lambda}$$

- second moment of Exp Dis.

$$E[X^2] = \frac{2}{\lambda^2}$$

- variance of Exp Dis.

$$Var(x) = E[X^2] - (E[X])^2 = \frac{1}{\lambda^2}$$

# Exponential Distribution

- Mean of Exp Dis.

$$E[X] = \int_{-\infty}^{\infty} x f(x) dx = \frac{1}{\lambda}$$

- second moment of Exp Dis.

$$E[X^2] = \frac{2}{\lambda^2}$$

- variance of Exp Dis.

$$Var(x) = E[X^2] - (E[X])^2 = \frac{1}{\lambda^2}$$

- Exp Dist. is memoryless : next state (( $t = 1$ )th) is independent of current state ( $t'$ th)
